

CRITICAL USER JOURNEY

Patient-facing workflow from study link to visit-ready handoff.

This page breaks the journey into phase-level steps, decision points, data captures, and stage gates. Use the phase controls to move through the flow and expand each step for implementation notes.

0

Intro and Orientation

Set expectations, establish privacy, and make the interface feel usable before clinical questions begin.

0.1

Land on study page

Public study link opens HealthCoach with the enrolled visit note loaded.

UI BEHAVIOR

Show welcome banner, phase navigation, and disabled future phases.

CAPTURED DATA

Visit note loaded at enrollment.

DECISION POINT

Proceed once the app has enough context for the patient.

0.2

Plain-language privacy

The bot explains how information is used and who can see it.

UI BEHAVIOR

Offer a short privacy disclosure and invite questions.

CAPTURED DATA

Privacy questions and answers are logged separately.

DECISION POINT

Patient can ask follow-up questions before continuing.

0.3

Setup language, name, and voice

Patient chooses English or Spanish, preferred name, microphone, and read-aloud preferences.

UI BEHAVIOR

Update labels and chat language in place.

CAPTURED DATA

Language, preferred name, voice input, and read-aloud preferences.

DECISION POINT

Settings persist for the rest of the journey.

0.4

Screen orientation

The UI highlights the phase nav, chat area, input, microphone, and progress bar.

UI BEHAVIOR

Use a brief guided overlay and confirmation prompt.

CAPTURED DATA

No clinical capture.

DECISION POINT

Ready button unlocks Phase 1.

Stage gate: patient confirms they are ready to begin the visit review.

1

Review Last Visit

Help the patient understand what happened at the prior visit and correct or confirm the AI interpretation.

1.1

Show last-visit AI summary

Confirm the visit and explain the prior note in plain language.

UI BEHAVIOR

Summarize what brought them in, findings, meaning, and plan.

CAPTURED DATA

Patient acknowledgment and any clarification questions.

DECISION POINT

Continue after the patient understands the summary.

1.2

PAIR evaluation side frame

Ask whether anything seems mistaken, missing, or confusing.

UI BEHAVIOR

Keep the primary chat focused while collecting structured feedback.

CAPTURED DATA

Mistake, missing item, and confidence signals.

DECISION POINT

Feedback becomes context for the next phases.

Stage gate: patient finishes reviewing the prior visit and chooses to continue.

2

Prepare for Next Visit

Gather priorities, interval changes, concerns, wins, and questions that should shape the next appointment.

2.1

Next-steps check

Ask whether the prior plan was completed or difficult to follow.

UI BEHAVIOR

Respond with empathy and practical help if there were barriers.

CAPTURED DATA

Plan completion, blockers, and support needs.

DECISION POINT

Unresolved barriers are included in the summary context.

2.2

Priorities up to three

Offer EHR-derived suggestions and open text for patient-selected priorities.

UI BEHAVIOR

Use checkboxes plus a free-text fallback.

CAPTURED DATA

Top concerns or goals for the visit.

DECISION POINT

Limit to a concise list so the handoff stays usable.

2.3

How have you been

Ask about symptoms, health changes, medication issues, tests, and communication with the care team.

UI BEHAVIOR

Use a short checklist plus detail prompts.

CAPTURED DATA

Interval history and follow-up details.

DECISION POINT

Collected items feed the pre-note draft.

2.4

Concerns and what is going well

Capture worries as well as positive progress since the last visit.

UI BEHAVIOR

Balance clinical concerns with strengths and wins.

CAPTURED DATA

Concern details and going-well note.

DECISION POINT

Both are preserved in the patient-facing summary.

2.5

Questions for provider

Suggest potential questions and let the patient select, edit, or add their own.

UI BEHAVIOR

Offer optional SMS for selected questions.

CAPTURED DATA

Selected provider questions and phone handoff intent.

DECISION POINT

Questions remain patient-controlled.

2.6

Anything else for visit

Invite practical requests such as prescriptions, paperwork, or doctors notes.

UI BEHAVIOR

Keep an open-ended final prompt before summarization.

CAPTURED DATA

Additional requests and logistics.

DECISION POINT

Ready to summarize transitions to Phase 3.

Stage gate: patient confirms the gathered visit-prep material is ready to summarize.

3

Summary and Approval

Convert the conversation into a visit-ready summary and require patient review before handoff.

3.1

Draft patient summary

Generate a plain-language summary with priorities, changes, concerns, and questions.

UI BEHAVIOR

Separate patient-facing recap from clinician-facing handoff content.

CAPTURED DATA

Draft summary and supporting context.

DECISION POINT

Patient sees the draft before anything is finalized.

3.2

Review and edit

Patient can revise, remove, or clarify any item.

UI BEHAVIOR

Keep edits local to the draft and regenerate only when needed.

CAPTURED DATA

Approved edits and removed items.

DECISION POINT

Approval button finalizes the content.

3.3

Pre-note preparation

Create the concise handoff from approved material only.

UI BEHAVIOR

Keep source context traceable to the patient conversation.

CAPTURED DATA

Approved pre-note payload.

DECISION POINT

Ready for clinician or evaluation workflow.

Stage gate: patient approves the final summary or sends it back for edits.

4

Handoff to Evaluation

Close the patient journey and route approved outputs into the broader study and clinical evaluation workflow.

4.1

Finalize session

Save session state, approved summary, and relevant study metadata.

UI BEHAVIOR

Confirm completion without overloading the patient.

CAPTURED DATA

Session status and approved artifacts.

DECISION POINT

Patient can return to history if needed.

4.2

Evaluation handoff

Move approved outputs into downstream evaluation steps.

UI BEHAVIOR

Separate research evaluation from patient-facing care guidance.

CAPTURED DATA

PAIR feedback, completion status, and approved summary.

DECISION POINT

Study team can evaluate the journey end to end.

Completion: patient receives next-step confirmation and the study workflow has the approved artifacts.

Privacy and Trust

Privacy copy appears before the chat asks for health details, and follow-up privacy questions are answered in context.

Accessibility

Every phase keeps text input available while progressively offering checkboxes, voice input, read-aloud, and clear confirmation buttons.

Clinical Handoff

The workflow preserves patient edits and approval before any pre-note or evaluation handoff is considered complete.
